but this idea of reducing work hours, having a more "socialistic" system is in my opinion against the very core of American experience.

The process of learning new information, storing it, and recalling it involves a complex interplay of brain functions (see figure 1).

two children born with severe combined immunodeficiency disorder ("scid") were reported to have 

faulty goods are classified as faulty if they are received damaged.

google a romaniei, adaugarea de fotografii proprii si comentarii in timp real, dar si adaugarea de noi
